Dear Chris,

How are you? How do you go to school? I go to school by MTR everyday. As it is a busy time, the train is always crowded. I always have to stand on my way but I don't mind. I am young and strong. However, some people are not. Let me tell you about what I saw recently on my way to school.

One morning, I saw an elderly person holding a cane. He got on the train. I was surprised because nobody gave up their seats. At last, the poor old man had to stand all the way to his stop. But that wasn't the end of it. Last week, I saw the same thing that was happening. This time, it was short and disabled man who was on crutches. He hobbled into the train but everybody was too busy to give away their seats. Today, I saw this horrible thing happen to a pregnant woman again.

I felt very sorry and sad for them. Why would the other people be so selfish? If I were sitting, I would offer my ^{seat to them} immediately. I also think that the people were very rude. Those people needed the seats really badly but the others don't give seats to them. How could they be so cold-

hearted?

I have some ideas too. I think the MTR can add a train cart for the people in need. Therefore, there will not be any of them standing. Not just the MTR, I think we could help them by making some advertisements and posters too. We could stick them on train stations, schools or restaurants too. That way, everybody could see it either when they are waiting for a train, at school or eating out. I think this will be a really helpful way to help them.

What about you? Is there some selfish people in London, England? What will you do if you saw a disabled, pregnant or an elderly person? I have so many questions for you. And also, do you have some advice for how to encourage people to give up their seats? If you do, please share them to me. I will be really glad if you could help me.

I am looking forward to reading your reply.

Yours,

Sammy
